SUMMARY

Supply chain and operations analyst with an MBA in Business Analytics and a Production Engineering background. Experienced in procurement cost analysis, supplier sourcing, demand forecasting, and claims auditing across retail pharmacy and grocery operations. Builds Excel and Power BI reporting that helps owners and managers make cost and sourcing decisions. Skilled in advanced Excel, Power BI, SQL, and PrimeRx.

WORK EXPERIENCE

Supply Chain & Audit Analyst, Novecks Pharmacy — Jan 2026 – Present

- Compared return-credit offers for expired and short-dated drugs and switched from the default vendor, recovering $5K over 4 months versus ~$2K (2.5x)
- Built a Power BI report comparing drug acquisition cost to reimbursement across 37,000+ PrimeRx prescriptions (~$10.6M revenue, 8 months); found 29% sold below cost ($133K lost), led by GLP-1 drugs (38% of losses), and used the findings to target supplier renegotiation on the highest-loss drugs
- Cut procurement costs by $5K+/month by negotiating supplier pricing and using wholesaler promotional offers
- Recovered $45K in disputed claims across 5 payers by reconciling PrimeRx submissions with payer records
- Built 8 recurring Excel dashboards (Power Query) on prescription volume and reimbursement, replacing manual data pulls for weekly management reviews
- Audit claims across ~1,000 prescriptions per week; fixed documentation gaps that cut rework by 12%

Supply Chain Analyst, HL Gada LLC — Feb 2025 – Jan 2026

- Gathered pricing and demand data from local grocers, delivery operators, and social media community surveys for a grocery launch
- Used that data in Excel models to set procurement volumes by category and benchmark supplier offers
- Managed a 20+ supplier database; sourced alternative wholesalers, cutting lead times by 3 weeks
- Planned delivery routes by grouping orders by area and scheduling around peak traffic, saving ~2 hours per delivery day
- Presented a PowerPoint analysis showing ~$12K in annual profit worked out to ~$4/hour across ~3,100 labor hours; recommended a wind-down

SKILLS

Analytics: Advanced Excel (Power Query, pivot models, lookups), Power BI, SQL, MySQL, Python (pandas, basic)
Systems and Tools: PrimeRx, MS Office (Excel, PowerPoint)
Operations: Demand forecasting, supplier sourcing, drug cost and reimbursement analysis, variance analysis, audit and compliance reporting

PROJECTS

Chip Warehousing & Shipping Optimization | Excel, Power Query, Python, HiGHS/MILP

- Analyzed 9,215 orders across 19 warehouses (Brunel University dataset); identified a 1,450-order capacity shortfall at the main warehouse over seven days, with 82% of orders having no alternative eligible warehouse
- Automated eligibility checks and built a MILP optimization model that assigned all 9,215 orders within daily capacity, reassigning 1,611 orders and cutting modeled warehouse costs by $141,692 (0.9%)
- Validated the plan within 0.03% of the model's minimum cost (solver runtime: 3.66 seconds); found only 48 spare order slots at the main warehouse across the week

Inventory & Sales Analytics — SQL Database Project | SQL

- Designed a relational schema consolidating inventory data from 10+ sources; wrote analytical SQL (joins, aggregations, window functions) to answer inventory and sales-volume questions

EDUCATION

Master of Business Administration (MBA), Business Analytics, Pace University | GPA 3.75 — Jan 2023 – Dec 2024

Bachelor of Engineering (B.E.), Production Engineering, Dwarkadas J. Sanghvi College of Engineering | GPA 3.2 — Aug 2018 – Jul 2022
